SQL

PROJECTS

Face Detection Classification

I have worked on this project with team of three members and my role on Classification Tasks: Worked on facial recognition (identifying individuals), emotion detection, and age or gender prediction. We utilized frameworks such as TensorFlow and OpenCV and achieved significant accuracy improvements through data augmentation and transfer learning. The model was optimized for real-time applications, such as security and user engagement systems.

Health Chatboat System

In the Final year project in the group of four memberes we are creating a Health Chatboat System is an artificial intelligence(AI) platform that assist users in managing their physical and emotional health. Chatboat analyze symptoms, suggests treatments, offers individualized health advice using natural language automata.
