Summary — Experienced PHP Developer with 3+ years of hands-on experience in developing and enhancing complex web applications and ERP systems and currently working at Beyoung Folks Pvt Ltd, where I contribute to the ongoing development of the company's custom ERP solution, focusing on modules like inventory management, order processing, returns exchanges, tax/invoice handling, and report generation using real-time business data. I have integrated multiple third-party APIs, including Shiprocket and Delhivery, to streamline logistics and operations. In previous roles, I developed systems such as a real estate listing platform, data management solutions, and a college fee deposit portal. Recently, I also built a real-time chat application using Laravel and Pusher. Passionate about writing clean, maintainable code and delivering solutions that solve real business problems.

Skills

Languages PHP, JavaScript

Frontend HTML, CSS, Bootstrap 4, jQuery, AJAX

Backend Laravel, CakePHP

APIs REST APIs, Third-Party Integration

Database MySQL

Domain Web Application Development, ERP Enhancement

Tools VS Code, Postman

Cloud AWS, Jenkins, Pusher

PM Tools Jira

OS Windows, Ubuntu

VCS Git, GitHub, Bitbucket

Concepts Object-Oriented Programming (OOP)

Experience

Beyoung Folks Pvt Ltd

Jun 2024 – Present

PHP Developer

- Worked on enhancement and maintenance of an in-house ERP system to streamline core business operations.
- Developed modules like Inventory Management, Order Processing, Returns Exchanges, and Tax/Invoice Generation.
- Integrated third-party APIs (Shiprocket, Delhivery) to automate logistics and shipping workflows.
- Created data-driven reports using optimized SQL queries and PHP logic for business insights.
- Debugged existing code and resolved performance bottlenecks in critical ERP modules.
- Implemented frontend components using AJAX, jQuery, and View templates.
- Followed Git-based workflows and collaborated with cross-functional teams for system planning.
- Participated in requirement discussions and sprint planning for scalable ERP development.

Web Search Solutions

Sep 2023 – May 2024

PHP Developer

- Worked as a PHP developer on a real estate listing platform, delivering end-to-end functionality for multiple user roles.
- Designed and developed the Admin Panel, Seller Panel, Buyer Panel, and Broker Panel for complete system management.
- Implemented user authentication, subscription logic, and payment integration to support premium listing features.
- Collaborated with the team to resolve real-time issues, optimize queries, and improve platform performance.
- Contributed to small- to mid-level enhancements across multiple client projects within tight deadlines.
- Handled feature updates, bug fixes, and system improvements based on customer feedback and testing cycles.

5G Infotech

Jun 2022 – Sep 2023

PHP Developer

- Contributed to the design and development of multiple dynamic web applications in the education and business domains.
- Developed a complete dynamic college website with an admin panel to manage banners, videos, images, and academic data.
- Built lead management features, including inquiry tracking, assignment, and follow-up workflows.
- Solved real-time issues in production, focusing on backend debugging, SQL query optimization, and performance improvements.
- Participated in small- to mid-level PHP-based projects, delivering modules like authentication, reporting, and dashboards.

Education

Mohanlal Sukhadia University

Bachelor of Commerce (B.Com), 2021

Projects

BEYOUNG-ERP

A custom enterprise resource planning system built to automate and centralize key business processes including inventory, orders, shipping, returns, billing, and analytics.

- Designed and built ERP modules from scratch and enhanced existing ones to meet evolving business requirements.
- Developed real-time shipment tracking features by integrating logistics APIs such as Shiprocket and Delhivery.
- Created internal tools to automate repetitive manual processes, improving operational efficiency across departments.
- Wrote optimized SQL queries to generate dynamic reports for inventory, order status, taxation, and other business data.
- Implemented user-friendly AJAX-based interfaces for real-time data updates and seamless user interactions.
- Ensured consistent version control using Git and actively participated in peer code reviews and deployment processes.

REAL ESTATE LISTING PLATFORM

A full-featured property listing and management system built to connect buyers, sellers, and brokers, with advanced search, subscription-based features, and multiple user roles.

- Built dynamic listing pages with search filters (by price, location, property type) and interactive map view.
- Developed a multi-role login system and custom dashboards for sellers, brokers, buyers, and admin.
- Integrated Google and Facebook login for quick user authentication.
- Built a subscription system to allow users to purchase premium plans using PayPal.
- Enabled image upload functionality for users to add photos to property listings.
- Created an agent dashboard to manage listings, inquiries, and lead tracking efficiently.

DATA MANAGEMENT SYSTEM

A role-based dynamic data management platform designed for organizations to handle operational tasks with multi-level access control.

- Developed a multi-role login system (Admin, Manager, Executive) with individual dashboards and permission-based access.
- Built dynamic Excel-like sheets allowing real-time row insertion, updates, and styling (e.g., row color, text formatting).
- Implemented permission-based control to define which roles can create, edit, or view specific sheets or rows.
- Enabled real-time interaction with sheet data using AJAX for smooth editing and user experience.
- Designed listing pages to manage multiple dynamic sheets accessible according to user roles and hierarchy.

FEES DEPOSIT PORTAL FOR COLLEGE STUDENTS

An online fee management system for educational institutions, designed to handle student fees, invoices, payments, and notifications.

- Built student and admin panels to manage fee types, due dates, invoices, and payment records.
- Enabled dynamic configuration of fee structures based on due dates, course type, and student categories.
- Integrated PayU payment gateway for real-time student fee payments and transaction handling.
- Implemented automated email notifications to remind students about upcoming or overdue fee payments.
- Developed admin features to view student-wise payment history, outstanding dues, and receipt generation.

REAL-TIME CHAT APPLICATION

A secure real-time messaging system built with user authentication and end-to-end encrypted message handling.

- Implemented user authentication and login system to enable secure access to the chat interface.
- Developed a user listing interface allowing users to select specific individuals for one-on-one chat.
- Integrated real-time communication using **Pusher**, enabling instant message delivery without page refresh.
- Managed encrypted message storage using a secure file-based system instead of a traditional database.
- Added chat deletion functionality with message lifecycle handling and privacy control features.
